State	Finished
Completed on	Thursday, 4 December 2025, 1:18 PM
Time taken	3 mins 2 secs
Marks	16.00/20.00
Grade	**80.00** out of 100.00

Question 1

Complete

Mark 1.00 out of 1.00

Docker images are built from:

- a. Git commits
- b. Dockerfile instructions forming immutable layers
- c. Virtual machine templates
- d. Linux kernel modules

Question 2

Complete

Mark 0.00 out of 1.00

Docker layer sharing works because:

- a. Layers are uniquely stored using content hashing
- b. Containers share memory
- c. Images auto-merge at runtime
- d. The kernel copies layers between containers

Question 3

Complete

Mark 1.00 out of 1.00

Docker volumes are used to:

- a. Persist data outside the container filesystem
- b. Install OS updates
- c. Improve network speed
- d. Increase CPU power

Question 4

Complete

Mark 1.00 out of 1.00

What does 'docker exec -it <container> sh' do?

- a. Executes a shell inside a running container
- b. Logs container output
- c. Rebuilds the image
- d. Starts a new container

Question 5

Complete

Mark 1.00 out of 1.00

What does 'git add' do?

- a. Creates a new branch
- b. Sends code to remote
- c. Commits files
- d. Adds files to staging area

Question 6

Complete

Mark 1.00 out of 1.00

What does 'git clone' do?

- a. Saves only the latest commit
- b. Creates a new repository
- c. Downloads an entire repository with history
- d. Starts a pull request

Question 7

Complete

Mark 1.00 out of 1.00

What does 'git pull' do?

- a. Pushes local commits to remote
- b. Shows current repo status
- c. Deletes remote branches
- d. Downloads and merges remote changes

Question 8

Complete

Mark 1.00 out of 1.00

What does 'git stash' do?

- a. Pushes changes to remote
- b. Saves uncommitted changes temporarily
- c. Deletes all local changes
- d. Rolls back last commit

Question 9

Complete

Mark 0.00 out of 1.00

What does HEAD refer to in Git?

- a. The remote repository
- b. The first commit
- c. A deleted commit
- d. The latest commit on the checked-out branch

Question 10

Complete

Mark 1.00 out of 1.00

What does the COPY instruction in a Dockerfile do?

- a. Copies files from host to image during build
- b. Copies files from one container to another
- c. Runs a command inside the container
- d. Copies images from Docker Hub

Question 11

Complete

Mark 1.00 out of 1.00

What happens when you run 'docker run -it ubuntu bash'?

- a. Creates an image named ubuntu
- b. Opens bash on the host
- c. Creates a VM and runs bash
- d. Creates a new container and opens interactive bash

Question 12

Complete

Mark 1.00 out of 1.00

What is a merge conflict?

- a. When a pull request is rejected
- b. When branches have different names
- c. When two commits modify the same lines differently
- d. When GitHub is offline

Question 13

Complete

Mark 1.00 out of 1.00

What is the default network mode for a Docker container?

- a. none
- b. host
- c. overlay
- d. bridge

Question 14

Complete

Mark 1.00 out of 1.00

What is the purpose of .gitignore?

- a. Ignores files from being version-controlled
- b. Lists branches
- c. Tracks remote URLs
- d. Deletes files automatically

Question 15

Complete

Mark 1.00 out of 1.00

Which command creates a new branch?

- a. git create branch
- b. git branch <name>
- c. git make-branch
- d. git checkout

Question 16

Complete

Mark 0.00 out of 1.00

Which command lists all running containers?

- a. docker show
- b. docker container ls
- c. docker ps -a
- d. docker list

Question 17

Complete

Mark 1.00 out of 1.00

Which command pushes changes to remote?

- a. git post
- b. git push
- c. git merge
- d. git upload

Question 18

Complete

Mark 0.00 out of 1.00

Which command removes all unused images, containers, and networks?

- a. docker clear
- b. docker system prune
- c. docker prune all
- d. docker system clean

Question 19

Complete

Mark 1.00 out of 1.00

Which command shows commit history?

- a. git history
- b. git show
- c. git log
- d. git commits

Question 20

Complete

Mark 1.00 out of 1.00

Which of the following best describes a Docker container?

- a. A hardware-level virtualization platform
- b. A virtual machine with its own OS
- c. A lightweight, isolated runtime environment using the host OS kernel
- d. A remote server that hosts applications
